Enterprise Solutions

Non-Profit

Problem: An aging legacy Cobol application and 90 departmental databases cause information islands for millions of membership records.

Solution: The solutions involved a co-management approach, and creating a single, consolidated enterprise database from the 90 departmental databases. The data warehouse solution provided enterprise access to members, groups, and donation information. Add-on projects involved tracking scholarships, event, and subscription management.

Insurance

Problem: A problematic FoxPro application couldn't scale to meet the demands of the nation's large home service insurance company.

Solution: Using Extreme Programming (XP), this solution manages home service contracts, vendors, customers, and includes call center management capabilities.

Data Center

Problem: An aging Cobol system no longer meets the needs for managing inbound media for the leading credit reporting agency in the country.

Solution: Using co-management and Rational Unified Process, the solution tracks all incoming media, manages workflow for data analysis of submitted records, and provides management with essential reporting.

E-Shopping

Problem: With the proliferation of e-commerce sites, web shoppers need a comprehensive site to get consolidated analysis of product information, pricing and availability.

Solution: The solution uses Extreme Programming to create a web portal solution consolidating product information from leading consumer web-sites providing visitors with detailed product intelligence.

What Is Strategic Staffing

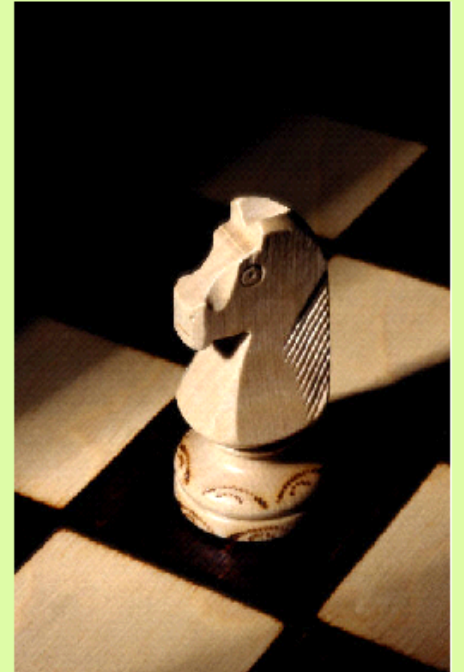

BRINGING VALUABLE TECHNICAL RESOURCES

WHEN YOU NEED THEM

We understand that our clients and partners do not always require the support of a dedicated solutions delivery team. Rather, they are looking for quick, dependable access to qualified, screened candidates with particular technology skills to help them meet fast approaching deadlines. Individuals that can seamlessly integrate into their team and quickly contribute to the project's success.

Twin Bridge provides this caliber of professional through a rich network of talent. We work closely with our clients to understand their needs and specifications to identify, screen, place, train and maintain a diversified staff of technically skilled and experienced consultants.

This proven experience provides our clients with trusted resources and allows Twin Bridge to maintain a strong customer base among Fortune 1000 and public sector organizations.

Large and small companies alike are realizing cost savings from outsourcing specialized technical skills.

LEVERAGE THE UNCOMPROMISED UBIQUITY OF THE INTERNET

The Internet took the consulting industry by storm creating myriad Internet consulting companies almost overnight. Suddenly, there were Internet *experts* everywhere. What these experts lacked in experience they often made up for in creative marketing.

Twin Bridge has been helping businesses utilize technology since 1992. While the technology certainly has changed in 10 years, the process of understanding business needs and translating them into a functional solution has not. Whether you are looking to create a marketing web site, a browser-based database application, or an e-commerce solution, Twin Bridge has the talent and experience to deliver.

This proven experience provides our clients with trusted resources and allows Twin Bridge to maintain a string customer base among Fortune 1000 and public sector organizations.

- *Web Crawlers*

Manufacturing

Problem: Invoice processing of Sales Program incentives for the nations largest truck manufacturer is a time-consuming, manual process.

Solution: Through co-management, the solution involved creating an Intranet application for managing Sales Programs with multiple interfaces to legacy accounting and invoicing system.

Service

Problem: An aging Service Department Automation System no longer scales to support the demands of the business.

Solution: Using Extreme Programming (XP), this solution manages home service calls, vendors, customers, inventory, and includes call center management capabilities. The solution allows customers to view call status and billing information over the Internet.

Consulting

Problem: Create a system to manage one of Europe's largest software firm's Management Consulting practice areas.

Solution: Using co-management and Microsoft SharePoint software, the solution provides the Management Consulting practice area with a portal that allows consultants access to corporate documents and project staffing information.

E-Shopping

Problem: With the proliferation of e-commerce sites, web shoppers need a comprehensive site to get consolidated analysis of product information, pricing and availability.

Solution: The solution uses Extreme Programming to create a web portal solution consolidating product information from leading consumer web-sites providing visitors with detailed product intelligence.

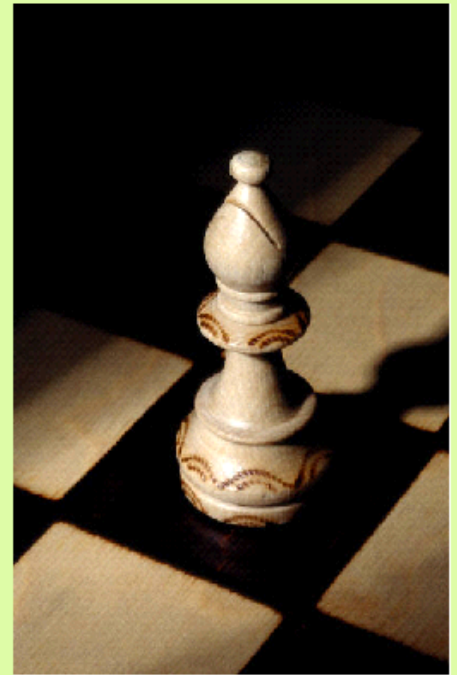

Departmental Database Solutions

ARE YOUR TECHNOLOGY NEEDS BEING MET BY CORPORATE IT?

More than ever before, departmental needs are being backburnered by corporate IT. Department managers are looking elsewhere for technical assistance for reporting and custom applications needs.

Twin Bridge helps departments using custom integration techniques for Microsoft Office and other desktop applications. Office users can use the desktop applications they already know to quickly and easily access and analyze information stored in corporate databases.

From reporting to specialized data entry applications, Twin Bridge bring the technology experience and answers to your department.

By enabling power users with the data they need and the applications they already know, departments become more efficient and break their dependency on corporate IT.

Departmental Database Solutions

Data Center

Problem: Daily, weekly, and monthly reporting for a Fortune 1000 is manual and time-consuming.

Solution: The solution extracts data from the corporate database and produces reports with *one-button* reporting. Automating the reporting reduced staffing needs by a full 8 days per month.

Consulting

Problem: Provide resource and information management capabilities for Management Consultants of a leading global information systems firm.

Solution: The solution used Microsoft SharePoint to provide a secure portal for the management of resources, documents, and project status reporting.

Non-Profit

Problem: Track registration information and handle the on-site registration of ten thousand attendees in a one hours window for an international trade show.

Solution: This Microsoft Access solution allowed the event department to register attendees by interfacing with corporate data. At the event, the solution verified the attendee and produced badges with efficiency.

Construction

Problem: Create a system to manage the commercial construction business.

Solution: This solution, create in MS Access, manages commercial construction sites through automation of punch lists, contacts, and project scheduling. The system is sold commercially throughout the US.

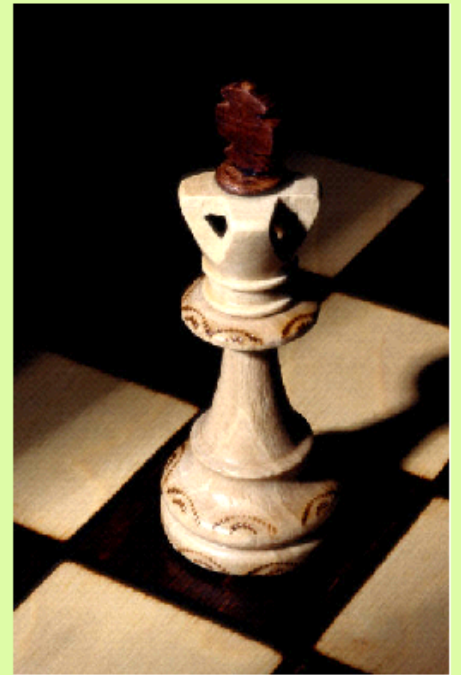

Your Network Foundation

STABILITY, SECURITY, AND BACK OFFICE SUPPORT THROUGH MANAGED NETWORK OPERATIONS.

Your network provides the technical foundation for your company.

Today, Microsoft Back Office includes Windows 2000 Server, SQL Server, Exchange Server, Terminal Server, IIS Server, Site Server, Proxy Server, LAN/WAN technologies, desktop operating systems and deployment technologies. Additionally, your network must be safe from e-mail and browser borne virus, not to mention hackers trying to access your network.

Twin Bridge's Managed Network Operations significantly reduces your IT staffing requirements through SLA-based service. Our team of technologists manage your systems for a fraction of the cost of having to staff these highly trained professionals.
